

URDANETA CITY UNIVERSITY STRENGTHENS INTERNATIONAL COLLABORATION IN GATHERING AND MEASURING DATA FOR THE SDGS

Urdaneta City University (UCU) reaffirms its commitment to global sustainability through its active participation in international collaborations aimed at gathering, analyzing, and measuring data related to the United Nations Sustainable Development Goals (SDGs). This initiative underscores the university's dedication to aligning its academic, research, and community engagement efforts with global standards of social responsibility and sustainable progress.

As part of its continuing pursuit of excellence, UCU has been strengthening its internal data collection systems and documentation processes to ensure accuracy and transparency in reporting institutional performance. This effort directly supports the Times Higher Education (THE) Impact Rankings, which assess universities' contributions to the SDGs through teaching, research, stewardship, and community outreach.

Recognizing the importance of reliable data in driving meaningful change, UCU collaborates with international and national partners to adopt standardized indicators and evidence-based approaches in measuring its impact. These collaborations not only enhance the university's global visibility but also promote shared learning, innovation, and accountability in advancing sustainable development goals such as quality education (SDG 4), gender equality (SDG 5), and partnerships for the goals (SDG 17).

Through the coordinated efforts of its colleges and offices, the university continuously gathers reports and documentation on academic achievements, community extension activities, and sustainability initiatives. This unified data collection framework allows UCU to demonstrate its contributions to inclusive education, environmental stewardship, and equitable opportunities for all.

MAKE SDG#17 A REALITY
