

PROMOTING CULTURAL ACCESSIBILITY AND SUSTAINABLE HERITAGE AT THE UNIVERSITY

The University upholds its commitment to Sustainable Development Goal (SDG) 11: Sustainable Cities and Communities by ensuring that its buildings, monuments, and natural heritage landscapes of cultural significance remain accessible to the public. As an educational institution that values history, culture, and sustainability, the University believes that open access to these sites fosters a deeper appreciation of local identity and collective heritage.

Through guided tours, public exhibitions, and cultural programs, the University invites students, researchers, and community members to explore and learn from its preserved landmarks and green spaces. These activities not only promote cultural awareness but also encourage environmental responsibility and civic participation.

Furthermore, the University continuously works on maintaining these areas following sustainable practices including eco-friendly maintenance, preservation of native flora, and responsible visitor management. These efforts ensure that heritage spaces are protected while remaining inclusive and beneficial for future generations.

By opening its cultural and natural assets to the community, the University strengthens its role as a steward of cultural sustainability, contributing directly to SDG 11's target of safeguarding the world's cultural and natural heritage.
