

PUBLIC ACCESS TO OPEN AND GREEN SPACES SUPPORTING SDG 11

The university recognizes the vital role of green and open spaces in promoting sustainability, wellness, and community engagement. In line with Sustainable Development Goal (SDG) 11: Sustainable Cities and Communities, the university provides free public access to its open and green spaces, such as gardens, courtyards, and recreational areas.

These areas are designed to serve as safe and inclusive environments where students, faculty, and community members can gather, relax, and connect with nature. By maintaining accessible and well-managed green spaces, the university encourages outdoor learning, environmental awareness, and healthy lifestyles among the campus and local community.

The university also ensures that its open spaces are environmentally sustainable through regular maintenance, waste management, and the planting of trees and ornamental plants. These efforts contribute to improving air quality, supporting biodiversity, and fostering resilience against climate change.

Through free and open access to green spaces, the university not only enhances campus livability but also extends its commitment to the broader community. This initiative reflects the core principles of SDG 11, which aim to make cities and human settlements inclusive, safe, resilient, and sustainable.

MAKE SDG#11 A REALITY
