

## UNIVERSITY ACTIONS PROMOTING SUSTAINABLE COMMUTING SUPPORTING SDG 11

In support of Sustainable Development Goal (SDG) 11: Sustainable Cities and Communities, the university actively undertakes actions to promote and increase the percentage of sustainable commuting among students, faculty, and staff. Recognizing the importance of reducing environmental impact and improving urban mobility, the university implements a range of initiatives that encourage the use of eco-friendly and shared transportation options.

The university provides free or subsidized shuttle services to and from nearby public transport hubs, making travel more accessible and reducing dependence on private vehicles. To further promote active and sustainable mobility, the campus offers bicycle parking and storage facilities, designated cycling lanes, and a bicycle and pedestrian policy

that ensures safety and convenience for non-motorized commuters.

Additionally, carpool and ride-sharing programs are encouraged through preferential or reduced parking fees for carpool and vanpool users.

“Electric vehicle (EV) charging stations” are also made available within campus premises, supporting the transition to low-emission transport.

These measures are complemented by continuous information campaigns and mobility programs that promote environmental awareness and responsible commuting behavior.

Through these collective efforts, the university demonstrates its commitment to building a more sustainable and inclusive campus environment, reducing its carbon footprint, supporting clean mobility, and contributing directly to the objectives of SDG 11, which aim to make cities and human settlements “inclusive, safe, resilient, and sustainable”.
